

NAVIGATION AND TRAFFIC

Once a job has been accepted on the handset, simply press 'Navigate' and the navigation tool of choice will guide you to the delivery location. Any mapping tool can be set as the primary choice. TrackTrans is fully integrated with Sygic for easy to use maps and added functionality for LCV's & HGV's across all of Europe. Sygic Truck Nav makes sure your vehicles use the best route available to them and avoid traffic, congestion and weight & height restrictions.
