

# GO PAPERLESS

TrackTrans TMS was designed and built inside a transport office. No other system could tick all the boxes required to go completely paperless and stop using multiple whiteboards to plan all upcoming work. Developers were brought in to work hand in hand with a busy transport team to design an easy to read, flexible and configurable solution with everything available via the web-based system.

TrackTrans can be accessed at all times, from anywhere, and allows your business to eliminate all paper and whiteboards immediately. Tried, tested, and continually improved over 20 years, the system is able to cope and assist with every challenge faced on a regular basis in a busy transport office.

Daily work sheets and manifests, loading sheets and scanning can all be done at the start of a shift. Proof of delivery is recorded with time and location information and can be emailed to customers at the time of signature. Invoicing and retrospective changes can all be applied to the job and submitted by admin users.
