

ORDER AND JOB CREATION

Eliminate paper and reduce admin with job creation and management. Manually enter jobs, use templates, or import electronically straight from your customers.

TrackTrans TMS a multitude of methods of creating jobs within the system.

Jobs can be scheduled on a specific date or by any of the following parameters:

- By
- After
- Before
- Between (date range)
- Between (time range)

Jobs can also be imported from other systems via EDI (Electronic Data Interchange) or created via automated Excel imports. TrackTrans users or their customers can email in a list of jobs via an excel spreadsheet and the jobs will be automatically pulled in and created.

Customers can also be given access to create their own jobs online. A notification will be triggered to let the planning team know a new job has been received.

Jobs can be split into multi-leg, via depots or multiple stages. All parts of a job will be linked by one master reference.
