

SCHEDULING AND MAP PLANNING

Schedule full and partial loads at your convenience. Multiple views mean you can plan in anyway you choose. Unallocated loads can be organised by dates, customers, postcodes or any other header. Once scheduled, runs will appear in the diary page and can easily be edited, removed or changed at any point, even once a shift has started.

Driver and vehicle availability can be managed to ensure you can't plan anything that isn't available on that specific date.

Every change and amendment made to a job or load is recorded within the 'movements' log to ensure an easy to read, audit trail is available for all work.

Barcodes and labels can be printed for each job for scanning in and out of stock, details of consignments can be created down to individual items.

Map planning allows you to view all jobs on a map, jobs are colour coded as collections or deliveries and can be drag and dropped onto the driver. A tally will tell you how many jobs remain unplanned and routes will be highlighted on the map.

The screenshot displays the TrackTrans web application interface. On the left, a map of the United Kingdom is populated with numerous red and blue location markers representing jobs. A sidebar on the map contains a legend for job types: Collections (red heart), Deliveries (blue heart), Driver Start Point (blue dot), High Priority (red heart with exclamation mark), Show Routes (orange line), TPT Mov & Hub (blue square), Group plan (blue square), and All/planned 250/6. The top navigation bar includes links for Jobs, Loads, Trucks, Enquiry, Diary, Invoicing, Reports, PODs, and Admin. The user is logged in as 'Admin1058s' with the role 'Depot-RDC DPT'. The main content area is divided into two sections. The top section, titled 'Without depot', shows a table of jobs with columns for 'Blank dates' (From: 24/07/2019, To: 30/07/2019), 'Customers', and 'Depots'. Below this is a 'READING DEPOT' section with a list of drivers and their assigned jobs. The bottom section shows a detailed view of a job for 'JL SMITH', including job ID, customer, depot, and delivery details. A 'Finalise & Export' button is visible at the bottom right.

Blank dates	Customers	Depots
From	To	Planned Date
24/07/2019	30/07/2019	26/07/2019
